*A Scientifically Blended  
Probiotic Formulation.*

# LACTOJET\*

Disease control in recent years has undergone a complete change with focus on infection prevention through better nutrition management. Coupled with that, the ban on antibiotics has all the more necessitated the need for nutritional feeding programs.

The powerful spore-forming bacteria in **LactoJet\*** acidify the gut of the animal and prevent the growth of pathogens like clostridia, Streptococci, E.coli, Salmonella and Vibrio species, thereby preventing occurrence of major diseases. These bacteria are also capable of releasing enzymes along with B group of Vitamins.

**LactoJet\*** is a scientifically blended probiotic formulation containing Gram positive Bacillus species bacteria. These bacteria are non-pathogenic. Bacillus sp. bacteria are spore forming and well documented to be uniquely suited for fish & prawn physiology.

The sporulated probiotic strains in **LactoJet\*** start reproducing immediately once inside the gut releasing acids and thereby decreasing the pH of the gut. The low pH environment is hostile to many pathogenic bacteria. Also the probiotic bacteria adhere to the bird gut wall and drive away pathogens by competitive exclusion.

In totality, **LactoJet\*** makes certain that the G.I. tract flora is well balanced and the feed is properly digested and absorbed. **LactoJet\*** ensures that the fish & prawn remains healthy and achieves good growth and lower FCR.

#### Benefits:

- Rapid propagation and stabilization of favourable gut microflora
- Enhanced immunity during crucial production milestones
- Better weight performance of animal due to favourable microbiome
- Increased daily weight gain ;
- Reduced mortality; Decreased FCR

#### Feeding recommendations:

Mix 50 gms of **LactoJet\*** complex to 1000 kg (One Ton) of feed. Apply at least 2-4 time in week. Please consult your Nutritionist or Veterinarian for specific dosage. The additive dosage of this product is rather small. Premix it with feeds tuff, then add it to the large quantities and mix it evenly. Top coated mixed feed should not be stored overnight.

**Presentation:** 200 gram. Pouch
