

Boxer*

BKC based Santizer

Molting is important step in the development process of the prawn. Molting also helps the prawn in getting rid of external parasites. After the molting process however, the prawn loses its' hard shell and is susceptible to parasites & infections.

Boxer* BKC with its detergent action not only helps the prawn in molting, but is an ideal sanitizer with broad spectrum of activity against fungi, bacteria and protozoans, protecting the delicate prawn from infection during its fragile post molting phase.

Composition: Alky dimethylbenzyl ammonium chloride 50% with boosters

Advantages:

- ◆ Enhances molting stages in shrimps life, thereby ensuring better health and growth

- ◆ Protects prawns against fungi, bacteria and protozoans attack & infections
- ◆ Has unique surface activity, thereby helps for better penetration and efficacy
- ◆ Eliminates ectoparasites Safe, stable and consistent performance Stabilizes Algal growth

Application Rates:

Shrimp/Prawn ponds : 1-4 litres/ha (1 metre water depth)

Fish Ponds : 4-5 liters/ha (1 ½ metre water depth)

Dilute and mix required quantity of **Boxer* BKC** in day time and turn on all the paddle wheel aerators for uniform distribution. Consult your aquaculture specialist for specific usage and directions.

Presentation: 1 & 5 Litre bottle.
