

Swift Relief

SWIFT-OX*

Solid source of Oxygen for pond water

Oxygen is one of the critical factors for the aquatic life, especially for shrimps and scampi.

Under semi-intensive shrimp farming the rate of depletion of DO is quite high. While an acute drop in DO levels is immediately noticed, frequent marginal drops are not easily noticeable. But such drops cause stress & make the culture weak. While the culture may look healthy, it is susceptible to minor challenges by pathogens or environmental variations and overall mortality will be higher and the yield will be significantly lesser

Swift-Ox* brings the assurance of a new life to your farm and ponds. **Swift-Ox*** generates and releases the lifesaving oxygen and helps maintain the Dissolved oxygen levels of the pond.

Reduces sludge formation and minimalises the chances of bacterial & viral diseases. **Swift-Ox*** is a boon to aqua farmers during oxygen stress period like rainy days, cloudy weather, high bacterial count in water etc.

Composition: **Swift-Ox*** is stable formulation of Peroxide Salts, designed as a solid source of active oxygen for aquaculture

Broadcasting recommendations: 500 gms — 1 Kg per acre of water spread area (2 feet depth). Repeat after deterioration of water parameters. Dosage can change marginally depending on pond conditions. Consult your aquaculture expert for exact dosage and directions

Benefits

- ◆ Swiftly releases Oxygen to improve Dissolved Oxygen levels in pond water
- ◆ Alleviates anaerobic conditions at pond bottom
- ◆ Reduces toxicity of obnoxious gases (CO₂, H₂S, Ammonia)
- ◆ Disinfects pond water, reduces bacterial population
- ◆ Improves farm yield and survivability

Presentation: Powder, 1 Kg, Jar & 5 Kg Pouch
